**GERANIUMS****THINK ABOUT YOUNG STOCK.**

In spite of the fact that there were ever so many Geraniums not in Bloom for Memorial Day, this season, there were more of them sold by the end of the bedding season than ever before. As usual, many of us have sold more plants than we should, not placing enough aside for stock. It isn't a bit too early to commence toward working up a young stock of plants intended for next spring. If you are short, why not locate what you will need this fall in rooted cuttings or 2-inch pot plants? You cannot afford to take chances in picking up old plants or unrooted cuttings. Such cuttings, taken from plants touched by frost usually don't amount to much; in most cases they will damp off before you can get them to root. If you have the room, it might be well to consider devoting a bench to stock plants from which you can take cuttings next winter. After all, such are the most satisfactory and with just a little care you will hardly ever lose one while in the sand or even if potted up unrooted, in 2's in a sandy soil.
